Country overview

Malnutrition burden

Bangladesh is on course to meet the global targets for under-five overweight and under-five stunting, but is off course to meet the targets for all other indicators analysed with adequate data. There is insufficient target data to assess Bangladesh's progress for female obesity.

Bangladesh experiences a malnutrition burden among its under-five population. As of 2014, the national prevalence of under-five overweight is 1.6%, which has decreased slightly from 2.6% in 2013. The national prevalence of under-five stunting is 36.2%, which is greater than the developing country average of 25%. Bangladesh's under-five wasting prevalence of 14.4% is also greater than the developing country average of 8.9%.

In Bangladesh, 55.3% of infants under 6 months are exclusively breastfed. Bangladesh's 2015 low birth weight prevalence of 27.8% has decreased from 36.2% in 2000.

Bangladesh's adult population also face a malnutrition burden. 39.9% of women of reproductive age have anaemia, and 10.3% of adult men have diabetes, compared to 9.3% of women. Meanwhile, 5% of women and 2.3% of men have obesity.

Notes: Data on the adult indicators are based on modelled estimates.

Progress against global nutrition targets 2019

- **Under-five stunting**: On course
- **Under-five wasting**: No progress or worsening
- **Under-five overweight**: On course
- **Low birthweight**: Some progress
- **Exclusive breastfeeding**: No progress or worsening
- **Adult male obesity**: No progress or worsening
- **Adult female obesity**: No data
- **Adult female diabetes**: No progress or worsening
- **Adult male diabetes**: No progress or worsening
- **WRA anaemia**: Some progress

Notes: WRA = Women of a reproductive age; NA = not applicable. The methodologies for tracking differ between targets. Data on the adult indicators are based on modelled estimates.
Child (under-five) nutrition status

Coexistence of wasting, stunting and overweight

Notes: Percentage of children under-five years of age who experience different and overlapping forms of malnutrition.

Prevalence of under-five stunting

Stunting at subnational level
Stunting at 5km level

Notes: 5 km level map shows prevalence at the 5 x 5-km resolution. Prevalence is the 2017 estimated prevalence, based on a model using a range of surveys between 1998-2018. See source paper for full methods.
