Country overview

Malnutrition burden

Cambodia is off course to meet the global targets for all indicators analysed with adequate data.

Cambodia experiences a malnutrition burden among its under-five population. As of 2014, the national prevalence of under-five overweight is 2.2%, which has increased slightly from 1.9% in 2010. The national prevalence of under-five stunting is 32.4%, which is greater than the developing country average of 25%. Cambodia's under-five wasting prevalence of 9.8% is also greater than the developing country average of 8.9%.

In Cambodia, 65.2% of infants under 6 months are exclusively breastfed. Cambodia's 2015 low birth weight prevalence of 12.1% has decreased from 15.4% in 2000.

Cambodia's adult population also face a malnutrition burden. 46.8% of women of reproductive age have anaemia, and 7.4% of adult men have diabetes, compared to 6.9% of women. Meanwhile, 4.8% of women and 2.7% of men have obesity.

Notes: Data on the adult indicators are based on modelled estimates.

Progress against global nutrition targets 2019

Notes: WRA = Women of a reproductive age; NA = not applicable. The methodologies for tracking differ between targets. Data on the adult indicators are based on modelled estimates.
**Child (under-five) nutrition status**

**Coexistence of wasting, stunting and overweight**

![Diagram showing coexistence of wasting, stunting, and overweight among under-five children.]

Notes: Percentage of children under-five years of age who experience different and overlapping forms of malnutrition.

**Low birth weight**

![No data available for low birth weight.]

---

**Prevalence of under-five stunting**

**Stunting at subnational level**

**Stunting at 5km level**

![Maps showing the prevalence of stunting at subnational and 5km levels.]

Notes: 5 km level map shows prevalence at the 5 x 5-km resolution. Prevalence is the 2017 estimated prevalence, based on a model using a range of surveys between 1998-2018. See source paper for full methods.
