Country overview

Malnutrition burden

Egypt is on course to meet the global targets for under-five overweight and under-five stunting, but is off course to meet the targets for all other indicators analysed with adequate data. There is insufficient target data to assess Egypt’s progress for low birth weight.

Egypt experiences a malnutrition burden among its under-five population. As of 2014, the national prevalence of under-five overweight is 15.7%, which has decreased from 20.4% in 2008. The national prevalence of under-five stunting is 22.3%, which is less than the developing country average of 25%. Conversely, Egypt’s under-five wasting prevalence of 9.5% is greater than the developing country average of 8.9%.

In Egypt, 39.5% of infants under 6 months are exclusively breastfed. There is insufficient data on low birth weight.

Egypt's adult population also face a malnutrition burden. 28.5% of women of reproductive age have anaemia, and 19.8% of adult women have diabetes, compared to 16% of men. Meanwhile, 41.1% of women and 22.7% of men have obesity.

Notes: Data on the adult indicators are based on modelled estimates.

Progress against global nutrition targets 2019

- Under-five stunting: On course
- Low birthweight: No data
- Adult male obesity: No progress or worsening
- WRA anaemia: Some progress
- Under-five wasting: On course
- Exclusive breastfeeding: No progress or worsening
- Adult female diabetes: No progress or worsening
- Adult male diabetes: No progress or worsening
- Under-five overweight: On course
- Adult female obesity: No progress or worsening

Notes: WRA = Women of a reproductive age; NA = not applicable. The methodologies for tracking differ between targets. Data on the adult indicators are based on modelled estimates.
**Child (under-five) nutrition status**

Coexistence of wasting, stunting and overweight

![Venn diagram showing coexistence of wasting, stunting, and overweight](image)

Notes: Percentage of children under-five years of age who experience different and overlapping forms of malnutrition.

---

**Prevalence of under-five stunting**

Stunting at subnational level

![Map showing stunting at subnational level](image)

Notes: 5 km level map shows prevalence at the 5 x 5-km resolution. Prevalence is the 2017 estimated prevalence, based on a model using a range of surveys between 1998-2018. See source paper for full methods.
