Guinea-Bissau

Country overview

Malnutrition burden

Guinea-Bissau is on course to meet the global targets for under-five overweight and infant exclusive breastfeeding, but is off course to meet the targets for all other indicators analysed with adequate data.

Although it performs relatively well against other developing countries, Guinea-Bissau still experiences a malnutrition burden among its under-five population. As of 2014, the national prevalence of under-five overweight is 2.3%, which has decreased slightly from 3.2% in 2010. The national prevalence of under-five stunting is 27.6%, which is greater than the developing country average of 25%. Conversely, Guinea-Bissau’s under-five wasting prevalence of 6% is less than the developing country average of 8.9%.

In Guinea-Bissau, 52.5% of infants under 6 months are exclusively breastfed, this is well above the Western Africa average of 32.5%. Guinea-Bissau’s 2015 low birth weight prevalence of 21.1% has decreased from 25.3% in 2000.

Guinea-Bissau’s adult population also face a malnutrition burden. 43.8% of women of reproductive age have anaemia, and 7.4% of adult men have diabetes, compared to 6.8% of women. Meanwhile, 13.7% of women and 5% of men have obesity.

Notes: Data on the adult indicators are based on modelled estimates.

Progress against global nutrition targets 2019

Under-five stunting
- Some progress

Low birthweight
- Some progress

Adult male obesity
- No progress or worsening

WRA anaemia
- No progress or worsening

Under-five wasting
- No progress or worsening

Exclusive breastfeeding
- On course

Under-five overweight
- On course

Adult female obesity
- No progress or worsening

Adult female diabetes
- No progress or worsening

Adult male diabetes
- No progress or worsening

Notes: WRA = Women of a reproductive age; NA = not applicable. The methodologies for tracking differ between targets. Data on the adult indicators are based on modelled estimates.
Child (under-five) nutrition status

Coexistence of wasting, stunting and overweight

![Coexistence of wasting, stunting and overweight](image)

Notes: Percentage of children under-five years of age who experience different and overlapping forms of malnutrition.

Prevalence of under-five stunting

Stunting at subnational level

![Stunting at subnational level](image)

Stunting at 5km level

![Stunting at 5km level](image)

Notes: 5 km level map shows prevalence at the 5 x 5-km resolution. Prevalence is the 2017 estimated prevalence, based on a model using a range of surveys between 1998-2018. See source paper for full methods.
