Country overview

Malnutrition burden

Lao PDR is off course to meet the global targets for infant exclusive breastfeeding, anaemia in women of reproductive age, low birth weight, male diabetes, and female diabetes. There is insufficient target data to assess Lao PDR’s progress for under-five overweight, under-five stunting, under-five wasting, male obesity, and female obesity.

Although it performs relatively well against other developing countries, Lao PDR still experiences a malnutrition burden among its under-five population. As of 2011, the national prevalence of under-five overweight is 2%, which has increased slightly from 1.3% in 2006. The national prevalence of under-five stunting is 44.2%, which is significantly greater than the developing country average of 25%. Conversely, Lao PDR’s under-five wasting prevalence of 6.4% is less than the developing country average of 8.9%.

In Lao PDR, 44.4% of infants under 6 months are exclusively breastfed. Lao PDR’s 2015 low birth weight prevalence of 17.3% has decreased from 20.4% in 2000.

Lao PDR’s adult population also face a malnutrition burden. 39.7% of women of reproductive age have anaemia, and 7.7% of adult men have diabetes, compared to 7.6% of women. Meanwhile, 6.7% of women and 3.7% of men have obesity.

Notes: Data on the adult indicators are based on modelled estimates.

Progress against global nutrition targets 2019

Notes: WRA = Women of a reproductive age; NA = not applicable. The methodologies for tracking differ between targets. Data on the adult indicators are based on modelled estimates.
**Child (under-five) nutrition status**

**Coexistence of wasting, stunting and overweight**

Notes: Percentage of children under-five years of age who experience different and overlapping forms of malnutrition.

**Low birth weight**

---

**Prevalence of under-five stunting**

**Stunting at subnational level**

**Stunting at 5km level**

Notes: 5 km level map shows prevalence at the 5 x 5-km resolution. Prevalence is the 2017 estimated prevalence, based on a model using a range of surveys between 1998-2018. See source paper for full methods.
