Country overview

Malnutrition burden

Mauritania is on course to meet the global target for infant exclusive breastfeeding, but is off course to meet the targets for all other indicators analysed with adequate data. There is insufficient target data to assess Mauritania’s progress for low birth weight.

Mauritania experiences a malnutrition burden among its under-five population. As of 2015, the national prevalence of under-five overweight is 1.3%, which has increased slightly from 1.2% in 2012. The national prevalence of under-five stunting is 27.9%, which is greater than the developing country average of 25%. Mauritania’s under-five wasting prevalence of 14.8% is also greater than the developing country average of 8.9%.

In Mauritania, 40.3% of infants under 6 months are exclusively breastfed, this is well above the Western Africa average of 32.5%. There is insufficient data on low birth weight.

Mauritania’s adult population also face a malnutrition burden. 37.2% of women of reproductive age have anaemia, and 9.4% of adult women have diabetes, compared to 8.5% of men. Meanwhile, 18.5% of women and 6.6% of men have obesity.

Notes: Data on the adult indicators are based on modelled estimates.

Progress against global nutrition targets 2019

- Under-five stunting: No progress or worsening
- Under-five wasting: No progress or worsening
- Under-five overweight: No progress or worsening
- Low birthweight: No data
- Exclusive breastfeeding: On course
- Adult female obesity: No progress or worsening
- Adult male obesity: No progress or worsening
- Adult female diabetes: No progress or worsening
- Adult male diabetes: No progress or worsening
- WRA anaemia: Some progress

Notes: WRA = Women of a reproductive age; NA = not applicable. The methodologies for tracking differ between targets. Data on the adult indicators are based on modelled estimates.
Child (under-five) nutrition status

Coexistence of wasting, stunting and overweight

Low birth weight

Prevalence of under-five stunting

Stunting at subnational level
Stunting at 5km level

Notes: 5 km level map shows prevalence at the 5 x 5-km resolution. Prevalence is the 2017 estimated prevalence, based on a model using a range of surveys between 1998-2018. See source paper for full methods.
