Subregional overview

Malnutrition burden

In the Western Asia subregion, there has been some progress towards achieving global nutrition targets. The global target for under-five wasting has five countries on course to meet it, under-five stunting has four countries on course, under-five overweight and infant exclusive breastfeeding each have two countries on course, while female diabetes has one country on course. However, not a single country in the subregion is on course to meet the targets for anaemia in women of reproductive age, low birth weight, male diabetes, male obesity, and female obesity. 15 countries in the subregion have insufficient data to comprehensively assess their progress towards these global targets.

Although it performs relatively well against other subregions, Western Asia still experiences a malnutrition burden among its under-five population. The average prevalence of overweight in under-fives is 9% - the second highest compared to other subregions in Asia. The prevalence of stunting in under-fives is 15.1%, this is less than the global average of 21.9%. The Western Asia subregion's prevalence of wasting in under-fives of 4% is also less than the global average of 7.3%.

Some 23.8% of infants under 6 months in the Western Asia subregion are exclusively breastfed, while the subregion's average low birth weight prevalence of 9.9% is less than the global average of 14.6%.

The Western Asia subregion's adult population also face a malnutrition burden. An average of 36.1% of women of reproductive age have anaemia, and 14.5% of adult women have diabetes, compared to 14.4% of men. Meanwhile, 35.9% of women and 23.6% of men have obesity.

Notes: Data on the adult indicators are based on modelled estimates.

Progress against global nutrition targets 2019

- **Under-five stunting**
  - 4 On course
  - 3 Off course
  - 11 No data

- **Under-five wasting**
  - 5 On course
  - 2 Off course
  - 11 No data

- **Under-five overweight**
  - 2 On course
  - 5 Off course
  - 11 No data

- **Low birthweight**
  - 0 On course
  - 13 Off course
  - 5 No data

- **Exclusive breastfeeding**
  - 2 On course
  - 3 Off course
  - 13 No data

- **Adult female obesity**
  - 0 On course
  - 18 Off course
  - 0 No data

Notes: WRA = Women of a reproductive age; NA = not applicable. The methodologies for tracking differ between targets. Data on the adult indicators are based on modelled estimates.

### Child (under-five) nutrition status

#### Coexistence of wasting, stunting and overweight

Notes: Percentage of children under-five years of age who experience different and overlapping forms of malnutrition.

#### Low birth weight

Prevalence of under-five stunting

Stunting at subnational level  Stunting at 5km level

Notes: 5 km level map shows prevalence at the 5 x 5-km resolution. Prevalence is the 2017 estimated prevalence, based on a model using a range of surveys between 1998-2018. See source paper for full methods.
Child (under-five) nutrition status over time
